

## Encoder Explorer SW - V6.0 has been released!

Here's a summary of what has changed. We recommend you update the 'Encoder Explorer' SW on your work stations. The upgraded version supports all company products and is backward compatible.

### Enabling automatic signal amplitude calibration

1. Supporting the new VLP encoders with amplitude calibration functionality:
  - VLP-80
  - VLP-140
  - VLP-170
2. Changing certain GUI elements from <Mechanical installation verification> to <Signal verification>

### Installing the software

#### System requirements:

OS Windows 7 or later (x32 or x64)

NET Framework version 4.6.1 or later

Run the Encoder Explorer file found on Netzer website:

Encoder Explorer Software Tool

Unzip downloaded file and run nested .msi
